Immune System Exhaustion and Methotrexate Efficacy in Rheumatoid Arthritis

The project investigates the novel aspect of immune cell exhaustion and dysfunction in response to methotrexate treatment in rheumatoid arthritis patients.

It aims to optimize therapeutic strategies by exploring the molecular mechanisms underlying immune exhaustion.

The project is co-funded by the governmental budget, granted by the Ministry of Education and Science under the 'Science for Society II' program. Contract number: NdS-II/SN/0343/2023/01.
